QTY4-30Type Hydraulic ground mould mobile brick machine

Product detailed introduction:

QTY4-30Type Hydraulic ground [cement brick machine](#), is one kind of new production of our company that synthesizing the advantage of both hydraulic and machinery, meeting the requirement of customer from the target market of oversea, basing at the principle of smaller investment with higher machinery property and it is specifically for the oversea market sale.

The hydraulic system and the machinery system of this equipment supplement each other and the operating of it is very simple. It can make the production of bricks without pallet, so it save the investment of pallet purchasing.

The major vibration form of it is mould vibration, who can make super vibration influence with small power .With the pressure of hydraulic system, it makes the raw material adding adequately and compacting adequately. The production of it could compare favourably with the production produc-ed by the larger hydraulic machine. It can produce various kind of concrete production by easily changing the mould.

2. QTY4-30 detailed technical parameters:

Main parameter	QTY4-30
Qty of pcs per mould	400*200*200mm

Add: Room 605.Unit 1.Building 4. No.39 Huayuan Road, Jinshui District, Zhengzhou City, Henan Province.

	400*250*200mm
Molding cycle	30 (Second)
Production capacity	2000~2600/ pcs/shift(8h)
Vibration frequency	4500/ r/min
Exciting power	28.6 KN
Overall power	5.95KW
Overall dimension	1300*1500*1000mm
Molding form	Vibration and Pressure
Main vibration form	Mould Vibration

3. Detailed production capacity

size	pcs/mould	pcs/h	pcs/8h
400X150X200	3	225	1800
400X200X200	2	150	1200
